April 29, 1959

Mr. Ernest J. Wesolowski
1416 Pasadena Avenue
Omaha 7, Nebraska.

Dear Mr. Wesolowski:

Many thanks for your reception report regarding our test transmissions of Saturday morning, April 25th. This was an unscheduled affair and we were trying to get our modulation up to 100%. Trouble with the modulator seems apparent.

As to our location, we are completely set up on the third floor of the Wisconsin National Bank building with antenna atop the building. The entire set-up is predominantly Gates equipment with the antenna being a quarter wave (approx) series fed vertical. The ground system consists of a truscon ground screen over the entire roof with four ground wires running to the earth and/or river below the building.

We operate sunrise to sunset with the present operating hours set at 6:30AM to 6:00PM. Sunday sign-on is at 8:00AM the year around. All times are presently Central Daylight.

Our frequency checks are made by Northern Engineering Labs in Burlington, Wisconsin and are made while we are on the air during the day. This eliminates the need for special frequency test broadcasts.

At this writing I cannot estimate when the next frequency or other broadcast will be made. We are appreciative of your efforts to report on our reception quality in your area.

Sincerely,

Richard R. Haskey
